

# KABELMAT WINDING TECHNOLOGY

We deliver the **total solution.**

# Specialists for storage and processing of winding materials

Kabelmat offers a wide range of solutions for processing cables, wires, pipes, steel cables, hoses and profiles.

# MACHINE WINDING - Length measuring devices

Companies that sell cables to third parties in the course of their business must measure them with length measuring devices that meet the requirements of the European Measuring Instruments Directive. **Kabelmat's length measuring devices have the approval** and are conformity assessed by the regionally responsible calibration authority before delivery to the customers (former initial calibration). All length measuring devices that measure without the presence of the customer, receive a memory for the cutting data and must be calibrated every two years.
